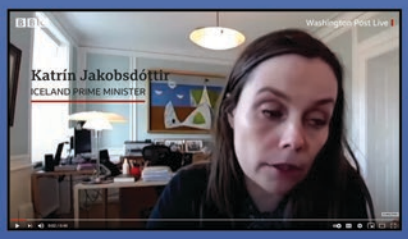
Emergency Response Pre-Planning & Support

REMOTE INTERVIEW KIT

Are you press conference ready?

In today's pandemic-stricken world, anyone can be thrust into an interview from anywhere. Reporters are rarely interviewing people in person when things happen. Microsoft Teams and Zoom interviews have become commonplace globally.

Don't let lighting, audio issues and bad angles keep stakeholders from hearing your message.



The Remote Interview Kit is a video calling station. It was specifically designed to be deployed to emergency responders that need to conduct remote news interviews in unpredictable environments, with low quality lighting and connectivity limitations.

If you have an incident and need to setup a remote press conference, are you able to provide consistent video quality to each of the participants from multiple locations?

Many corporate and government policies limit your ability to run various types of software, or connect to unapproved networks and social media channels. The Remote Interview Kit is a stand-alone solution that can connect over WiFi, LAN cable, or USB LTE dongle.
